

## **"Status Update and Perspective of Subproject D.4"**

Michael Krone (Subproject D.4)

In my talk, I will give a brief overview of recent results of subproject D.4 and ongoing projects. This includes a recently published survey on visualizations for biomolecular structures. In another project, interactive visualizations of dynamic molecular data in web browsers or on mobile devices were investigated. A currently ongoing project deals with planar mappings of complex molecular surfaces to facilitate the visual analysis of binding site and other surface-related phenomena. I will conclude my talk with directions for future work that is planned within the subproject.
